

Welcome to the Connecticut River Sportsmen's Club Range Basic Orientation

125 Whitcomb Rd, Swanzey, New Hampshire 03446

Keep in mind, security cameras are in operation covering the Clubhouse (inside & out) and the range.

Front Gate: Open the combination lock with the 4 digit code you were given when you joined/renewed. Open the gate and secure it to the tree. Either lock the padlock back to the chain or keep the lock with you.

Front Gate Security: Remember to close and lock the gate when you leave the range if you are the last one out

Portable Air Gun Range: Once this is set up and put in operation, we will post photos and instruction on its use. We expect the trailer to be delivered in mid-April. It will take a few weeks to get the inside renovated and ready for shooting.

Member Sign In Book. There is a book for each the left and center Bullet Traps (the right trap is still under construction) Complete an entry in the log book based on the Bullet Trap you intend using. Be as accurate on ammunition usage as possible.

Clubhouse Entry Door Lock: This operates by entering the 4 digit lock code. When activated, the 'Schlage' button will blink. This is the button above the numbers. While blinking, the lock/bolt can be operated (locked or unlocked). To lock the door, press the 'Schlage' button. It will blink and you can operate the lock/bolt. Please ensure the door is locked.

Shed and Aluminum Bench locks: These operate with the same 4 digit code as the gate and clubhouse lock. Be sure to secure these locks when done with them.

If you use the “Rifle Range” sign from the Clubhouse, be sure to return it to the Clubhouse. The photo shows the best placement of this sign to ensure someone doesn’t drive into your line of fire.

Bullet Traps/Target Boxes: Be sure to wear your eye and ear protection out on the range. Use a horizontal run of string from left to right and clips of some sort to hold your targets. Wooden clothes pins work great. There is usually string at the target boxes. Be sure to put the string at a height that allows bullets to impact into the sand. Remember, all bullets are to be fired into the bullet traps.
